If rames and are expressed through transcriptional editing. ";

Proc. Natl. Acad. Sci. U.S.A. 93:3602-3607(1996).

C. - PTM: Pre-86P is N-91940509/lated. This precursor is processed into mature sGP and delta-peptide by the host furin. Both cleavage fragments contain sialic acid, but only the delta-peptide is O-GY Cosylated (By similarity).

C. -- PTM: Processed (By similarity).

C. -- RNA EDITING: Modified positions=295; Note-Partially edited. RNA editing at this position consists of an insertion of one adenine nucleotide. The sequence displayed here is the small secreted glycoprotein, derived from the edited RNA. The unedited RNA gives rise to the full-length transmembrane glycoprotein (AC P8766).
                                                                                                                                                                                                            Gaps

"Delta-peptide is the carboxy-terminal cleavage fragment of the nonstructural small glycoprotein sGP of Ebola virus.";

Virology 265: 164-171(1999).

-! SUBCELLULAR LOCATION: Screted.
-!- FTM: Pre-sGP is N-glycosylated. This precursor is processed into mature sGP and delta-peptide by the host furin. Both cleavage fragments contain sialic acid, but only the delta-peptide is O-glycosylated.
-!- FTM: Ersaments contain sialic acid, but only the delta-peptide is O-glycosylated.
-!- RNA EDITING: Modified_positions=295; Note=Partially edited. Twenty

percent of the mRNA isolated from infected cells is edited. RNA editing at this position consists of an insertion of one adenine nucleotide. The sequence displayed here is the small secreted glycoprotein, derived from the edited RNA. The unedited RNA gives rise to the full-length transmembrane glycoprotein (AC Q05320). SIMILARITY: Belongs to the filoviruses glycoprotein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- COFACTOR: Magnesium is required for catalysis and for stabilizing the dimer (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE FROM N.A.
